# SC-100: Designing Security Solutions for Applications and Data

## Evaluate Microsoft 365 security for the Copilot rollout

**Tim Warner**

# Checking in with Globomantics

Copilot is licensed for 6,000 knowledge workers

The permissions cleanup never happened

A sales draft quoted a Materials margin report

Pause the rollout, or ship it with controls?

# Read Secure Score before widening the rollout

**Defender portal: adopted controls across Microsoft 365**

**Current license score: work you can finish without buying**

**Third-party status: points Microsoft can't verify**

**Adoption, not breach likelihood: attack paths rank risk**

# Evaluate Defender for Office 365 and Defender for Cloud Apps

# Pick the plan by how your SOC works

| Plan 1: prevention | vs. | Plan 2: investigation and response |
| --- | --- | --- |
| **Safe Attachments and Safe Links** | | **Threat Explorer** |
| **Impersonation protection** | | **Automated investigation and response** |
| **Real-time detections** | | **Attack simulation training** |
| **Fits a team that blocks and moves on** | | **Fits a SOC that hunts email threats** |

# Separate the user's session from the app's access

**Session controls: what a user does inside the app**

**App governance: what an OAuth app can reach**

**Generative AI category: where shadow AI shows up**

# Evaluate device management with Microsoft Intune

# Intune marks devices, and Conditional Access decides

**Compliance policy: Intune marks the device compliant or not**

**Conditional Access: grants or blocks on that signal**

**Personal phones: app protection without enrollment**

# Evaluate Microsoft Purview for Microsoft 365 data

# Classify first, then protect the item and the path

**Classify: info types, exact data match, classifiers**

**Sensitivity label: protection that travels with the file**

**Data loss prevention: rules for how content moves**

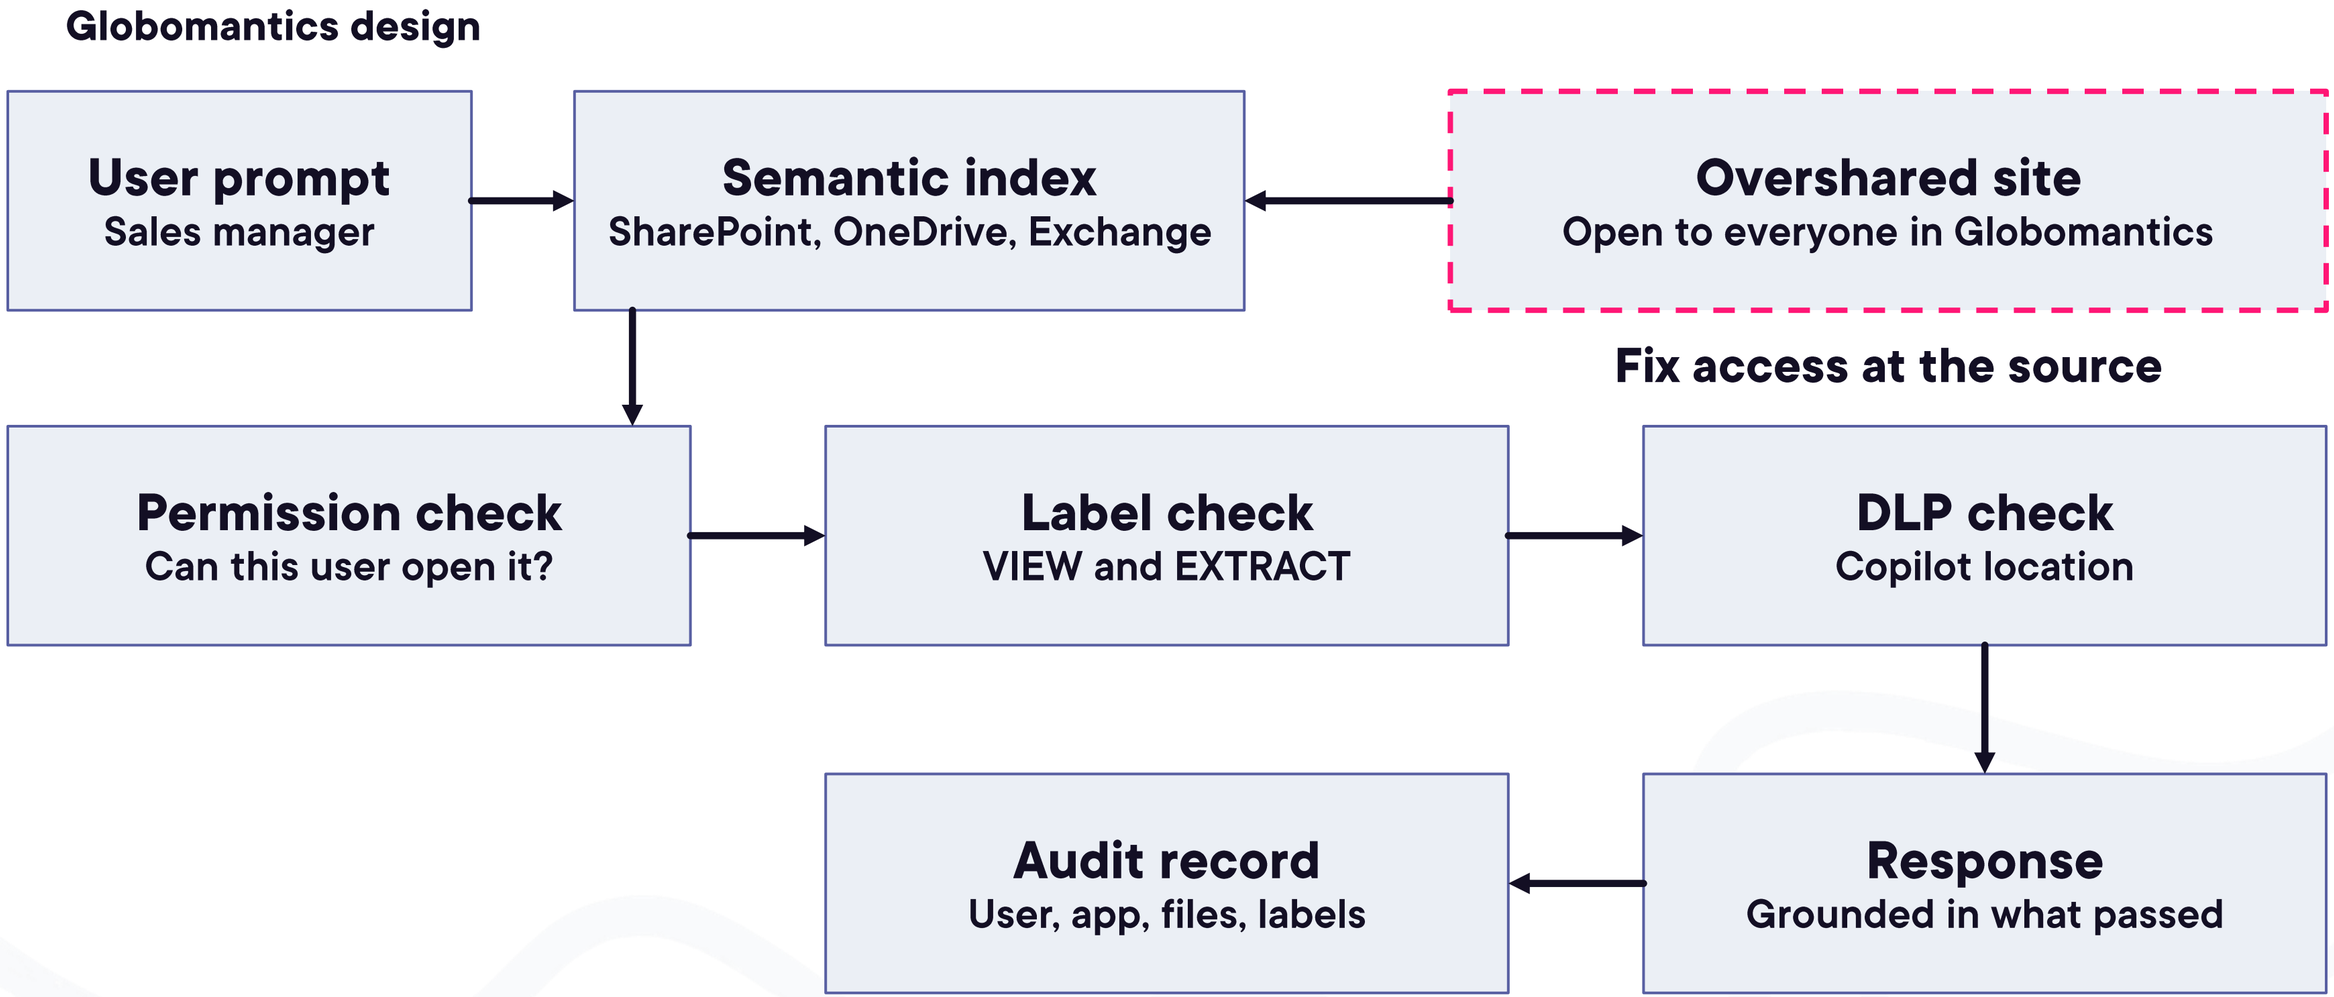

**Auto-labeling: classification without waiting on users**

# Choose who holds the key, and what Microsoft can read

| Customer Key | vs. | Double Key Encryption |
| --- | --- | --- |
| **You control the root keys** | | **Microsoft never holds your key** |
| **Services still process content** | | **No Microsoft 365 service can read it** |
| **Search, eDiscovery, and Copilot keep working** | | **Search, eDiscovery, and Copilot lose it** |
| **Fits a key-custody mandate** | | **Reserve it for the most restricted content** |

# Evaluate Copilot data security and compliance controls

# Copilot answers inside existing permissions

# Find the overshare, then contain it

**Data risk assessments: find the overshared sites**

**SharePoint Advanced Management: report and fix site access**

**Restricted Content Discovery: hide a site while you fix it**

**Audit, eDiscovery, and retention: evidence for every interaction**

# Demo: Trace a Copilot answer to the files behind it

**Read the Copilot interaction in Purview Audit, see why the user could open the file, then pick the overshared site to fix first**

# Practice question and key points

# Theme: Copilot data security and compliance

## Question

**Globomantics has a Microsoft 365 E5 subscription and uses Microsoft 365 Copilot. A Microsoft SharePoint site contains product sheets and a workbook. The workbook has a sensitivity label named Highly Confidential that applies encryption. Users in the sales department copy figures from the workbook into quotes.**

**You need to prevent Microsoft 365 Copilot from using the content of the workbook in responses. The solution must meet the following requirements:**

- **Ensure that the sales users can continue to copy content from the workbook.**
- **Ensure that the sales users can continue to use Microsoft 365 Copilot with the product sheets.**

# Theme: Copilot data security and compliance

## Question

**You need to prevent Microsoft 365 Copilot from using the workbook in responses. What should you do?**

**A. Enable Restricted Content Discovery for the SharePoint site.**

**B. Remove the EXTRACT usage right from the sensitivity label.**

**C. Remove the Microsoft 365 Copilot licenses from the sales users.**

**D. Create a data loss prevention policy for Microsoft 365 Copilot.**

# Theme: Copilot data security and compliance

**Answer: D**

**You need to prevent Microsoft 365 Copilot from using the workbook in responses. What should you do?**

**A. Enable Restricted Content Discovery for the SharePoint site.**

**B. Remove the EXTRACT usage right from the sensitivity label.**

**C. Remove the Microsoft 365 Copilot licenses from the sales users.**

**D. Create a data loss prevention policy for Microsoft 365 Copilot.**

# Checking out with Globomantics

Read Secure Score for adoption, and attack paths for risk

Choose Defender plans and app controls by how you operate

Label the item, govern how it moves, and choose the key

Fix oversharing at the source, and contain it meanwhile
